BECAUSE

 when communication is critical

VINGTOR STENTOFON

by ZENITEL GROUP

Vingtor-Stentofon products are developed by the Zenitel Group and comprise a range of high-quality communications equipment and systems. In business since 1901, Zenitel's products are recognized worldwide for offering high-quality communications for both offshore and onshore installations. Primary system offerings in the Vingtor-Stentofon product portfolio are Public Address and Intercom. Zenitel and the company's global partner network also integrate these systems with other security devices such as Radio, CCTV, Access Control and Alarm, for a comprehensive security solution.

SINGLE PRODUCT RANGE

3 DIFFERENT PLATFORMS

Invest in a product that keeps pace with changing technology, and that both anticipates and secures your future communication needs. Our equipment and devices can be used on 3 different platforms that each caters to a specific set of communication requirements.

ALPHA COM

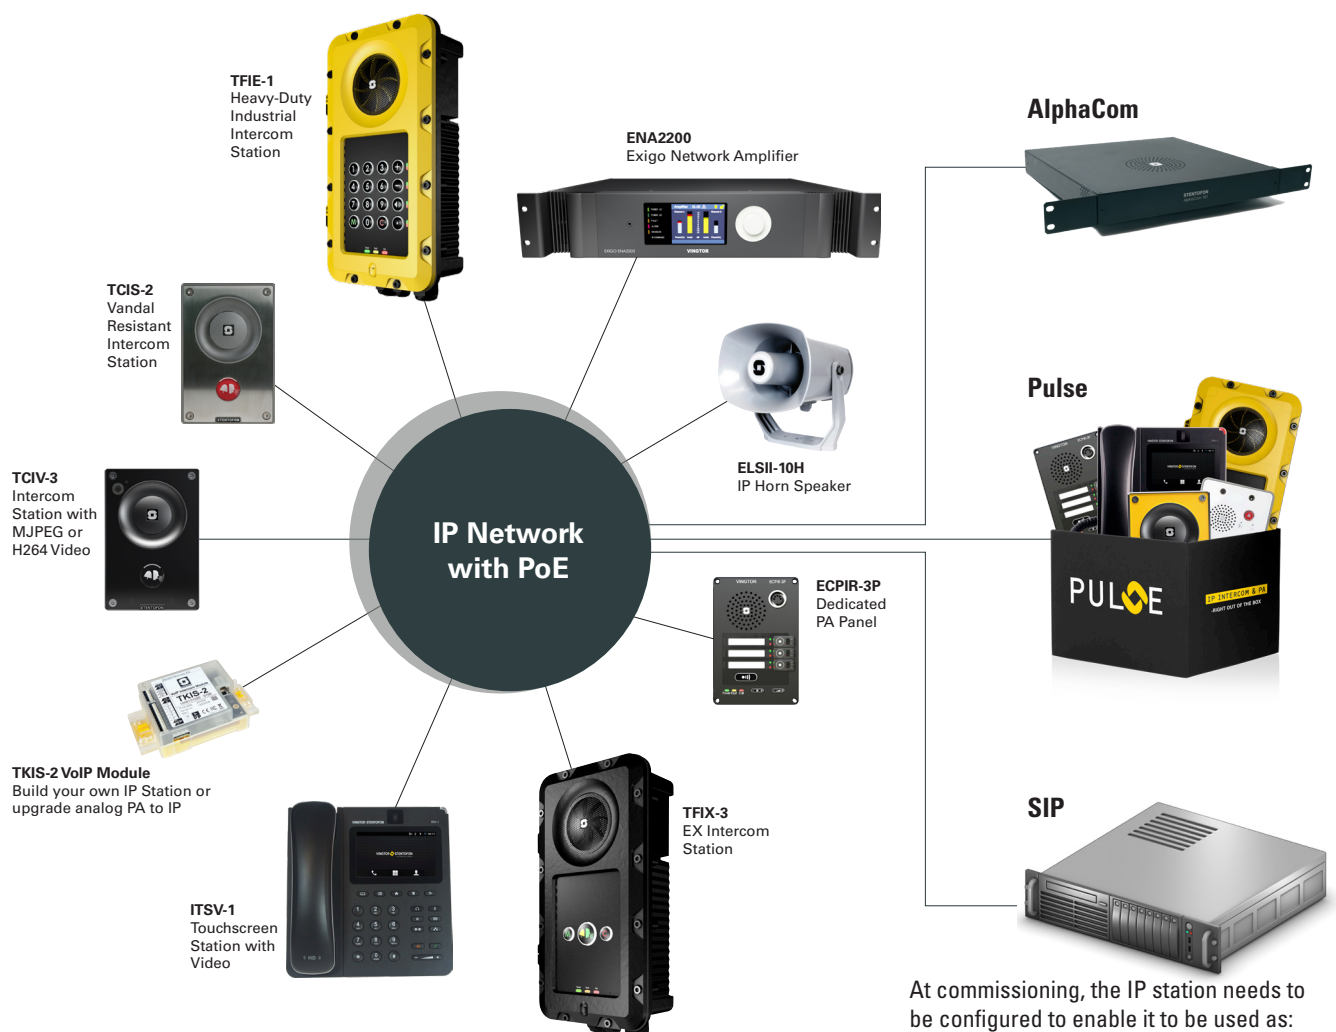

AlphaCom is all about integration. All communication devices (radio, telephone, PA, intercom, etc.) come together on the AlphaCom server to be integrated with the overall Building Management System. This allows the use of powerful tools such as voice and audio in maintaining building security.

PULSE

Pulse is a self-contained communication platform that's embedded in the actual IP Intercom and IP PA devices. No external server hardware is required and configuration is easily done using a web browser. Easy to deploy, use and maintain. Ideal for SMB companies.

SIP

Our devices also support the **SIP** protocol. This means that they can be used on any VoIP communication platform that supports SIP. We understand that some customers prefer to keep the number of servers and other hardware to a minimum. Using SIP, you're able to hear, be heard and understood, when and where you need to, every time – all while using your existing VoIP system.

At commissioning, the IP station needs to be configured to enable it to be used as:

- AlphaCom extension
- Pulse extension
- SIP extension

AlphaCom

AlphaCom XE is a powerful communication platform that integrates on two levels. It allows all voice communication systems to meet on a single platform and to be operated from a single device. In addition, it allows all those different communication technologies to be the voice and ears of the overall security system. Thanks to its open, modular design and scalable architecture, you can tailor the system to support applications of almost unlimited specificity and complexity.

Vingtor-Stentofon CCoIP® (Critical Communication over IP) implies the employment of VoIP applications required in critical situations. AlphaCom XE is designed with CCoIP incorporation, which ensures the delivery of instant and secure voice and data services. The AlphaCom XE system provides carrier-class system availability and protects resources in an IP intercom environment, by using embedded IP security mechanisms. The main security mechanisms used are restricted management access, separate management interface, internal firewall, integrity check (MD5), virtual LAN (IEEE 802.1Q) and network access control (IEEE 802.1X).

HD
VOICE

- High capacity
- Energy saving
- Global networking and integration
- IP, SIP and analog station support
- Extended software options
- SIM card-based software configuration and disaster recovery
- Full backwards compatibility with any AlphaCom system
- Extended memory supporting future expansion and new services
- High quality professional PA broadcasting & messaging services
- Security voice guidance for public safety and building security
- Auto-attendant functionality (automatic voice supported switchboard)
- Voice-supported call guidance

Pulse

Vingtor-Stentofon Pulse is a cost-effective solution for small-to-medium-sized communication requirements. The system allows for as few as two stations and is scalable up to 3000+ units, depending on your needs.

Pulse System Description

- Allows up to:
 - 64 stations per system
 - 10 VS-clients (PC)
 - 10 SIP-clients (e.g., VoIP App)
- Embedded server, no additional server equipment required
- Dedicated tool for discovery, upgrading, configuration & maintenance
- Automatic discovery of all Vingtor-Stentofon devices
- System setup is possible using web browser in less than 10 minutes
- Stations support Active Noise Reduction
- Audio Messaging
- Group Call with Re-Call and Answer Function
- Pulse mode is available on all our IP Stations
- Wide range of special purpose intercom stations
- Open for SIP-enabled 3rd-party devices
- SIP Trunking to ISDN/GSM telephony gateways
- DTMF support
- Support for dedicated PC client (VS-Client)
- G711, G722 & G729 codec support
- SDK/API Support
- Scripting (Use of Virtual IOs)
- Network up to 50 PULSE systems

SIP

Setting the Standard for Open and Transparent technology.

SIP is the quintessential example of an open and transparent technology that unifies voice communication. This protocol is integrated and available out-of-the-box, on every single IP Device in our portfolio.

Our SIP products work anywhere in any iPBX system, are certified for integration in Avaya, Cisco, NEC and Alcatel-Lucent systems, and have been used on these platforms for many years. In addition, our products are currently being used successfully on other platforms such as Samsung, Mitel, Asterisk, and Panasonic.

Our devices support G.711 (μ -law and A-law), G.722 and G.729.

 <p>The Vingtor-Stentofon SIP Intercom solution has successfully passed compliance testing with Avaya Aura Session Manager and is officially recognized as compliant.</p>	 <p>The Vingtor-Stentofon IP Intercom Stations with SIP software version 2.2 have been tested as compatible with Cisco Unified Communications Manager.</p>	 <p>The Vingtor-Stentofon SIP Intercom solution is compatible with the following NEC platforms: All NEC IP PBX Family 3C : Softswitch SV8300 : IP PBX iS3000 : Hybrid PBX.</p>	 <p>A selection of stations are compatible with Alcatel-Lucent OmniPCX Enterprise R10.</p>

... and more

Virtual I/O Scripting

We implement this special feature on our Turbine devices to make them more versatile. In or Outgoing Calls and DTMF can trigger our stations to send a custom script to, e.g., an access-control terminal to open a door. Removing the physical connection between our device and, in this case, an electronic door lock provides a more secure access-control solution.

Keeping Your System Running

Our IP stations support a range of features to make it easier to upgrade and maintain firmware. We support open protocols such as SNMP, TFTP and RSTP. In addition, we offer various SIP registration methods to enable redundancy (Parallel, Serial, Top-Down and Cisco's SRST protocol). Our products are highly reliable, with an expected MTBF of 400K hours.

Network Security

Our years of experience from working with large iPBX brands such as Cisco, Avaya and Alcatel have taught us the importance of hardening our devices against network attacks. We work ceaselessly to implement and upgrade security protocols to keep our devices updated with the latest security standards.

IP Intercom Stations

All IP Stations work with AlphaCom, SIP, and Pulse.

AlphaPro

AlphaPro is the tool for configuring the AlphaCom XE system. It is self contained, simple to install and easy to use. When a new server is to be configured, the server is given a working default factory setting.

The operator can then modify the settings such as:

- Directory (type of station, line interface, display name and more)
- Define groups (cell groups, guard groups)
- Interface to CCTV, PA, paging, DECT
- AlphaNet
- And other custom behaviour

There are currently over 100 defined features which can be programmed with AlphaPro. AlphaPro is an off-line tool. This means that it is possible to enter all parameters without the necessity of being connected to the server. Once all parameter are entered, AlphaPro can be connected to the server and the parameters can be sent. AlphaPro can also upload configuration information from an server.

- AlphaPro connects to an server via the IP network or a local RS232 interface
- AlphaPro E7 runs without a hardware key. It gives access to all features except AlphaNet, but only for 36 subscribers

AlphaPro Professional uses the Professional hardware key. It gives access to all features for all stations. This version must be used when extensive changes to the autoloader are required.

Vingtor-Stentofon Operator

Vingtor-Stentofon Operator is a PC-based system management package for the AlphaCom Audio Servers. It shows the status of intercom devices using maps and makes it easy for operators to:

- View calls and call requests
- Act easily and quickly on events and requests
- Store an onscreen history of events through a Journal

Vingtor-Stentofon Operator is primarily intended for use in a control room environment. It provides a clear overview for operators with multiple layout possibilities according to the operator's preference. Layouts can be defined to cover single or multiple screens and can be added, edited and deleted by administrators.

OPC

OPC provided easy and fast integration based on standard OPC technology. The OPC license is installed on the AlphaCom XE audio Server.

The AlphaCom OPC Server implements the following OPC standards:

- OPC Data Access (OPC DA V2/V3)
- OPC Alarm & Events (OPC AE V1.1)
- OPC Unified Architecture (OPC UA)

Basic Audio Messaging License

License requires AMC IP v11 hardware. Includes Delayed PA broadcast using recall to prevent feedback problems, 1 auto-attendant message, 2MB memory storage for audio messages.

1009648501

Enhanced Audio Messaging License

License requires AMC IP v11 hardware. Includes Delayed PA broadcast using recall to prevent feedback problems, 3 auto-attendant messages, 10MB memory storage for audio messages, Full ASVP functionality.

1009648502

PA Recall License

License can be installed on both AMC IP v10 and v11 hardware. Includes Delayed PA broadcast using recall to prevent feedback problems.

Audio Messaging

With Audio Messaging you can store and play audio messages directly from your PC or intercom station, and the messages are safely stored in the flash memory of the AlphaCom server. Audio Messaging supports a wide set of applications including auto-attendant, PA broadcasting, voice response and voice driven menus. It is easy to initiate audio messages from 3rd party systems using OPC, SDK or Data Protocol. Make live PA and group call broadcasts with recall for handling feedback and verifying messages. Schedule PA and group broadcasts for specific events and set up an auto-attendant with voice guided menus for handling incoming calls. You can also set up a voice response for call request waiting messages and absence messages. The feature set of the license is compatible with that of the ASVP card, but offers some important functionalities in addition.

Redundancy

Protect your system with our redundant server solution. The concept provides a 1:1 redundancy of AlphaCom XE servers allowing you to install the servers in separate racks or server rooms.

Having the AlphaCom servers in different racks or server rooms provides options to:

- Have servers in different fire zones
- Have redundant power sources
- Do maintenance in server room (patch panels, power, etc) without system downtime

In the 1:1 setup the servers are setup as a high availability pair sharing the same configuration. One of the servers is operational, while the other is in standby mode. The solution automates disaster recovery. Change-over is fast. The total change over time depends on system-size. Normally it will take less than a minute for a full system with 552 IP-stations.

Software Development Kit

The Software Development Kit (SDK) makes it easy for 3rd party developers to make value added applications for integration with the AlphaCom E and XE system. The SDK is based on Microsoft .NET technology. This gives the 3rd-party developer access to a wide set of software components as well as an extensive Microsoft .NET development environment and tool set. Some examples of applications which are possible to make using the SDK:

- Integrated control room panel on a touch-screen for public address, radio and intercom
- Interactive intercom icons on a map with

ability to call, broadcast public address, and listen in

- Integration with video analytics to provide voice response if someone is trespassing
- Integration with CCTV, where a camera is switched on Voice Activity Detection
- PC based Call Handler with graphical user interface for control rooms and guards

The SDK consists of a number of assemblies (DLLs) which can easily be integrated with software written in C# or VB.NET.

To further support 3rd-party developers, help files, a quick start manual, Wiki

pages and example applications including source code are available to get you fast up to speed with writing value-added applications for the AlphaCom E and XE platform.

VS-Recorder

- AlphaCom Call Recording
- Audio and Video Stream Recording

The Vingtor-Stentofon Recorder software is a fully-featured IP based audio recorder with additional support for video recording. The solution is able to record calls from all types of terminals connected to AlphaCom: analog and IP intercoms, analog and IP phones. The Recorder is also an NAVR – Network Audio/Video Recorder.

Billing

The Billing application makes it possible to control the communication fees and expenses in an AlphaCom XE system. The application is a full billing system which can generate revenues from the system. It is possible to handle a set of billing scenarios. Fees can, for instance, be calculated depending on carrier type, duration, called number, and time of day. The billing of the users can be done by either prepaid or post-paid payment methods.

Exigo IP Amplifiers

Robust IP PA

Exigo IP amplifiers have been designed to meet the robust requirements in the O&G, Industrial, and Marine segments. This is solved by extensive self-monitoring, EN60945 approval ratings, robust class-D technology, and a wide range of inputs and outputs.

The Exigo IP amplifiers are compatible with the AlphaCom system and can be combined with the available features to make powerful solutions combining intercom, Talk-Back and PA for operational use.

Line End Transponder Monitoring Principle

The intelligent line end transponder ensures reliable monitoring of the loudspeaker lines. The Exigo amplifier knows how many line end transponders are used and will check that all the line end transponders are able to communicate with the amplifier according to the monitoring cycles. Where impedance measurements may result in an erroneous report of a broken line, the line end transponder will always report the correct health of the loudspeaker loop.

Flowire

The Flowire Converter enables Ethernet to run on the same two wires as power, enabling simpler cabling and opens up for longer cable hauls.

1008080110

FCDC1 Flowire Ethernet Converter, DC Voltage

- One single pair of cable can be used to distribute power and data
- The cable hauls can be longer, reducing the need for switches and/or repeaters
- Up to 10 Flowire devices can be connected to the same 2-wire cluster
- Existing infrastructure can be used, even though only a single pair is available. This reduces the total cost of retrofit projects
- The Flowire converter can be used with any Ethernet enabled device (not limited to Vingtor-Stentofon products)
- Power 24 Vdc - 48 Vdc

Weight: 0.3 kg

1008080210

FCDC2 Flowire Ethernet Converter, DC Voltage

- One single pair of cable can be used to distribute power and data
- The cable hauls can be longer, up to 2 km, reducing the need for switches and/or repeaters
- Up to 10 Flowire devices can be connected to the same 2-wire cluster star topology
- Existing infrastructure can be used, even though only a single pair is available. This reduces the total cost of retrofit projects
- The Flowire converter can be used with any Ethernet enabled device (not limited to Vingtor-Stentofon products)
- Protection IP-20
- Important:**
- 24V DC non-PoE for Ex equipment
- FCDC2 Flowire is required for Ex Call & Alarm Panels

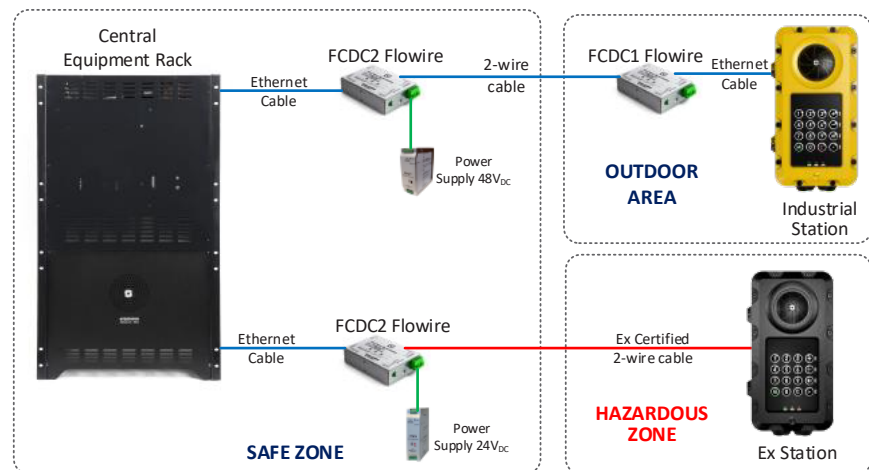

Size (WxHxD): 110 x 66 x 17 mm

Weight: 0.3 kg

Connection to Central Equipment Rack for Outdoor and Ex Stations

The stations can use the 2-wire Flowire system for connection. Flowire is used to extend the Ethernet connection and support power distribution on the 2-wire cabling infrastructure. To support the Flowire interface, the central equipment rack must be equipped with an FCDC2 Flowire Converter. Each outdoor station will require its own FCDC1 Flowire Converter.

The Ex station located in the hazardous zone is connected to the central equipment rack located in the safe zone using an Ex certified 2-wire cable.

AlphaNet and multi-module linking for the AlphaCom XE Audio Servers can be via data networks. This does not require additional hardware inside the server, but opening up the capability requires the correct licence. Licenses are required in all connected modules and nodes. There is no difference whether a license is used for an AlphaNet or a multi-module connection. A static license means that the destination of an audio link needs to be defined at commissioning, a dynamic link is a common resource, and can be used for any audio link that requires connection. The data links between modules and nodes are not licensed.

The multi-module license gives the possibility to expand the size of an Audio Server. It is possible to add up to 4 modules in a multi-module Audio Server. The modules will be linked together over a local area IP network (LAN). 30 VoIP channels are available in each server module. Note that the license is only required in the master module in the multi-module server.
